

# RADIO TEST REPORT ETSI EN 301 908-1 V13.1.1 (2019-11) ETSI EN 301 908-2 V13.1.1 (2020-06)

**Product**: Smart phone

Trade Mark: Blackview

Model Name: A53 Pro

Family Model: N/A

Report No.: STR221215001007E

## **Prepared for**

DOKE COMMUNICATION (HK) LIMITED

RM 1902 EASEY COMM BLDG 253-261 HENNESSY ROAD WANCHAI HK CHINA

## Prepared by

TEST RESULT CERTIFICATION

WANCHAI HK CHINA

Manufacturer's Name .....: Shenzhen DOKE Electronic Co.,Ltd

Road, Guangming District, Shenzhen, China

**Product description** 

Product name....: Smart phone
Trademark ...: Blackview
Model Name ...: A53 Pro

Family Model .....: N/A

**Standards** .....: ETSI EN 301 908-1 V13.1.1 (2019-11)

ETSI EN 301 908-2 V13.1.1 (2020-06)

This device described above has been tested by NTEK, and the test results show that the equipment under test (EUT) is in compliance with the article 3.2 of the Directive 2014/53/EU requirements. And it is applicable only to the tested sample identified in the report.

This report shall not be reproduced except in full, without the written approval of NTEK, this document may be altered or revised by NTEK, personnel only, and shall be noted in the revision of the document.

**Test Sample Number** ...... T221215001R003

Date of Test

Date (s) of performance of tests...... Dec 15, 2022 ~ Jan 03, 2023

Date of Issue...... Jan 03, 2023

Test Result..... Pass

Testing Engineer :

(Mary Hu)

Authorized Signatory:

(Alex Li)

1.1 TEST FACILITY

Shenzhen NTEK Testing Technology Co., Ltd.

Add.: 1/F, Building E, Fenda Science Park, Sanwei Community, Xixiang Street, Bao'an District,

Shenzhen 518126 P.R. China

FCC Registered No.: 463705 IC Registered No.:9270A-1

CNAS Registration No.:L5516

#### 1.2 MEASUREMENT UNCERTAINTY

The reported uncertainty of measurement  $\mathbf{y} \pm \mathbf{U}$ , where expended uncertainty  $\mathbf{U}$  is based on a standard uncertainty multiplied by a coverage factor of  $\mathbf{k=2}$ , providing a level of confidence of approximately 95 %  $^{\circ}$ 

| No. | Item                         | Uncertainty |
|-----|------------------------------|-------------|
| 1,_ | Conducted Emission Test      | ±1.38dB     |
| 2   | RF power,conducted           | ±0.16dB     |
| 3   | Spurious emissions,conducted | ±0.21dB     |
| 4   | All emissions,radiated(<1G)  | ±4.68dB     |
| 5   | All emissions,radiated(>1G)  | ±4.89dB     |
| 6   | Temperature                  | ±0.5°C      |
| 7   | Humidity                     | ±2%         |

## 2. GENERAL INFORMATION

## 2.1 GENERAL DESCRIPTION OF EUT

| Equipment :          | Smart phone   |
|----------------------|---|
| Trade Mark:          | Blackview   |
| Model Name:          | A53 Pro   |
| Family Model:        | N/A   |
| Model Difference:    | N/A   |
| Support Band:        | <ul> <li></li></ul>   |
| Release Version:     | R99   |
| Frequency Bands:     | Uplink: WCDMA Band I:1920~1980MHz WCDMA Band Ⅷ:880~915MHz Downlink: WCDMA Band I:2110~2170MHz WCDMA Band Ⅷ:925~960MHz |
| Modulation Mode:     | WCDMA(HSDPA/HSUPA):QPSK   |
| SIM Card:            | SIM 1 and SIM 2 is a chipset unit and tested as a single chipset. The SIM 1 is chosen for test.                       |
| Power Class:         | 3   |
| Antenna Description: | PIFA antenna (Band I: 0.7 Band VII:0.7 dBi)   |
| Adapter              | Model: QZ-01000EA00<br>Input: 100-240V~50/60Hz 0.3A<br>Output: 5.0V2.0A (10.0W)                                       |
| Battery              | DC 3.87V, 5080mAh, 19.66Wh  |
| Rating               | DC 3.87V from battery or DC 5V from adapter   |
| Hard Ware Version    | HCT-M659MB-A2   |
| Soft Ware Version    | A53Pro_EEA_M659_V1.0  |

2.2 LIST OF TEST EQUIPMENTS

| Item | Kind of<br>Equipment                       | Manufacturer   | Type No.        | Serial No.    | Last calibration | Calibrated until | Calibration period |
|------|--|----------------|-----------------|---------------|------------------|------------------|--------------------|

2.3 TEST ENVIRONMENT/CONDITIONS

| Normal Temperature (NT):                              | 20 25 °C   |                       |       |
|---|--|-----------------------|-------|
| Relative Humidity:                                    | 30 75 %  | *                     |       |
| Air Pressure:   | 980 1020 hPa   |                       |       |
| Extreme Temperature:                                  | Low Temperature (LT) = High Temperature (HT) =                     | -10°C<br>40°C         | 4     |
| Extreme Voltage of the EUT (Declared by manufcturer): | Normal Voltage (NV) =<br>Low Voltage (LV) =<br>High Voltage (HV) = | 3.87V<br>3.4V<br>4.2V | AND S |

### Note:

The High Voltage 4.2V and Low Voltage 3.4V was declarated by manufacturer, The EUT couldn't be operate normally with higher or lower voltage. The High temperature and Low temperature was declarated by manufacturer.

#### 2.4 TEST Mode

The following tests were completed according to the test requirements outlined in section 5.2 of the 3GPP TS34.121-1 specification. The EUT supports power Class 3, which has a nominal maximum output power of 24 dBm (1.7/-3.7) 12.2kps RMC is used for this testing. Power control set to All bits up. A summary of these settings are illustrated below:

| Test Mode         | Test Channel |
|-------------------|--------------|
| 4                 | Low:Ch 9612  |
| WCDMA Band I mode | Mid:Ch 9750  |
|                   | High:Ch 9888 |

| Test Mode            | Test Channel |
|----------------------|--------------|
|                      | Low:Ch 2712  |
| WCDMA Band VIII mode | Mid:Ch 2788  |
|                      | High:Ch 2863 |

## 3. SUMMARY OF TEST REPORT

| ETSI EN 301 908-1 V13.1.1 | Description of Test                   | Test Result |
|---------------------------|---------------------------------------|-------------|
| §4.2.2                    | Radiated emissions (UE)               | Pass        |
| §4.2.3                    | Radiated emissions (BS and repeater)  | N/A         |
| §4.2.4                    | Control and monitoring functions (UE) | Pass        |

| ETSI EN 301 908-2 V13.1.1 | Description of Test                                     | Test Result      |
|---------------------------|---|------------------|
| §4.2.2                    | Transmitter maximum output power                        | Pass             |
| §4.2.3                    | Transmitter spectrum emission mask                      | Pass             |
| §4.2.4                    | Transmitter spurious emissions                          | Pass             |
| §4.2.5                    | Transmitter minimum output power                        | Pass             |
| §4.2.6                    | Receiver Adjacent Channel Selectivity (ACS)             | Pass             |
| §4.2.7                    | Receiver blocking characteristics                       | Pass             |
| §4.2.8                    | Receiver spurious response                              | Pass             |
| §4.2.9                    | Receiver intermodulation characteristics                | Pass             |
| §4.2.10                   | Receiver spurious emissions                             | Pass             |
| §4.2.11                   | Out-of-synchronization handling of output power         | Pass             |
| §4.2.12                   | Transmitter Adjacent Channel Leakage power Ratio (ACLR) | Pass             |
| §4.2.13                   | Receiver Reference Sensitivity level                    | Pass             |
| §4.2.14                   | Receiver Total Radiated Sensitivity (TRS)               | N/A <sub>3</sub> |
| §4.2.15                   | Total Radiated Power (TRP)                              | N/A <sub>3</sub> |

#### Note:

(1)

N/A: Test not applicable PASS: EUT Pass this test case (2)

The TRS and TRP requirement applies to handheld phones/DUTs that are narrower than 72 mm. The wider of this DUT is 75mm. (3)

## 4. TEST PROCEDURES AND RESUTLS

## 4.1 TERMS IN THE COLUMN "VERDICT" FOR THE TEST RESULTS LIST OF THISSECTION:

| Verdict | Description  |
|---------|--|
| PASS    | EUT passed this test case  |
| FAIL    | EUT failed this test case  |
| Decl.   | "Declaration": NTEK has received documents from the applicant and/or manufacturer which show conformity to the applied standards for this test case. |
| N/A     | Test case not applicable for the EUT, please see the column "Note" for detailed  |

4.3 ETSI EN 301 908-1 V13.1.1 (2019-11)

### §4.3.1 – RADIATED EMISSIONS (UE)

#### Applicable Standard & Limits

The frequency boundary and reference bandwidths for the detailed transitions of the limits between the requirements for out-of-band emissions and spurious emissions are based on ITU-R

Recommendations SM.329-10 [3] and SM.1539-1 [4].

The requirements shown in table 4.2.2.2-1 are only applicable for frequencies in the spurious domain.

Table 4.2.2.2-1: Radiated spurious emissions requirements (UE)

| Frequency   | Minimum<br>requirement (e.r.p.)/<br>reference<br>bandwidth<br>idle mode | Minimum requirement<br>(e.r.p.)/<br>reference bandwidth<br>traffic mode | Applicability  |
|---|---|---|--|
| 30 MHz ≤ f < 1 000 MHz  | -57 dBm/100 kHz   | -36 dBm/100 kHz   | All  |
| 1 GHz ≤ f < 12,75 GHz   | -47 dBm/1 MHz   | -30 dBm/1 MHz   | All  |
| fc - 2,5 × 5 MHz < f < fc<br>+ 2,5 × 5 MHz                                      |   | Not defined   | UTRA FDD,<br>UTRA TDD, 3,84 Mcps option,<br>cdma2000, spreading rate 3 |
| fc - 2,5 × BW <sub>Channel</sub> MHz < f < fc + 2,5 × BW <sub>Channel</sub> MHz |   | Not defined   | E-UTRA FDD, E-UTRA TDD,<br>Mobile WiMAX, UMB                           |
| fc - 2,5 × 10 MHz < f < fc1 + 2,5 ×<br>10 MHz                                   |   | Not defined   | UTRA TDD, 7,68 Mcps option   |
| fc - 4 MHz < f < fc + 4 MHz   |   | Not defined   | UTRA TDD, 1,28 Mcps option cdma2000, spreading rate 1                  |
| fc - 500 kHz < f < fc + 500 kHz   |   | Not defined   | UWC 136, 200 kHz option  |
| fc - 250 kHz < f < fc + 250 kHz   |   | Not defined   | UWC 136, 30 kHz option   |
| NOTE: fc is the UE transmit centr   | e frequency.  |   |  |

#### Test Procedure

#### **Test Data**

#### **Environmental Conditions**

| Temperature       | 18~22° C       |
|-------------------|----------------|
| Relative Humidity | 45~66%         |
| ATM Pressure      | 101.1~101.7kPa |

Test Result: Pass.

Please refer to following data table.

#### Remark:

Emission Level = Meter Reading + Factor, Margin= Emission Level – Limit
The laboratory has completed all tests for normal and extreme voltage conditions
and WCDMA+WIFI mode. This report shows only the worst test data.

#### §4.3.2 –Control and monitoring functions (UE)

#### **Definition & Limits**

This requirement, together with other control and monitoring technical requirements identified in the table of cross references in the applicable part, verifies that the control and monitoring functions of the UE prevent it from transmitting in the absence of a valid network.

This test is applicable to radio communications equipment and ancillary equipment in the operating band defined in the applicable part of this multi-part harmonised standard.

This test shall be performed on the radio communications equipment and/or a representative configuration of the ancillary equipment.

#### Limits:

The maximum measured power during the duration of the test shall not exceed -30 dBm.

#### Test method

- a) At the start of the test, the UE shall be switched off. The UE antenna connector shall be connected to a power measuring equipment, with the following characteristics:
- the RF bandwidth shall exceed the total operating transmit frequency range of the UE for operation with an applicable part;
- the response time of the power measuring equipment shall be such that the measured power has reached within 1 dB of its steady state value within 100 µs of a CW signal being applied;
- it shall record the maximum power measured.

NOTE: The equipment may include a video low pass filter to minimize its response to transients or Gaussian noise peaks.

- b) The UE shall be switched on for a period of approximately fifteen minutes, and then switched off.
- c) The EUT shall remain switched off for a period of at least thirty seconds, and shall then be switched on for a period of approximately one minute.
- d) The maximum power emitted from the UE throughout the duration of the test shall be recorded. The results obtained shall be compared to the limits in clause 4.2.4.2 in order to prove compliance.

#### Test Data

| Test Condition | Monitoring band      | Max Measured<br>Power(dBm) | Limit(dBm) | Result |
|----------------|----------------------|----------------------------|------------|--------|
| Normal         | The whole band range | -42.23                     | -30        | Pass   |

§4.3.3 —Out-of-synchronization handling of output power

#### Definition

The UE shall monitor the DPCCH quality in order to detect a loss of the signal on Layer 1. The threshold Qout specifies at what DPCCH quality levels the UE shall shut its power off. The threshold is not defined explicitly, but is defined by the conditions under which the UE shall shut its transmitter off, as stated in this clause.

The DPCCH quality shall be monitored in the UE and compared to the threshold Qout for the purpose of monitoring synchronization. The threshold Qout should correspond to a level of DPCCH quality where no reliable detection of the TPC commands transmitted on the downlink DPCCH can be made. This can be at a TPC command error ratio level of e.g. 20 %.

#### Limits

When the UE estimates the DPCCH quality over the last 160 ms period to be worse than a threshold Qout, the UE shall shut its transmitter off within 40 ms.

The quality level at the thresholds Qoutcorrespond to different signal levels depending on the downlink conditions DCH parameters. For the conditions in table 4.2.11.2-1, a signal with the quality at the level Qout can be generated by a DPCCH\_Ec/lor ratio of -25 dB. The DL reference measurement channel 12,2 kbit/s is specified in ETSI TS 134 121-1 [1], clause C.3.1 and with static propagation conditions. The downlink physical channels, other than those specified in table 4.2.11.2-1, are as specified in table E.3.3 of annex E in ETSI TS 134 121-1 [1].

| Parameter             | Value                                  | Unit         |
|-----------------------|--|--------------|
| Î₀r /l₀c              | -1                                     | dB           |
| l <sub>oc</sub>       | -60                                    | dBm/3,84 MHz |
| DPDCH_E <sub>C</sub>  | See figure 4.2.11.2-1: Before point A: | dB           |
| DPCCH_E <sub>c</sub>  | See figure 4.2.11.2-1                  | dB           |
| Information Data Rate | 12,2                                   | kbit/s       |

Figure 4.2.11.2-1 and table 4.2.11.2-2 show an example scenario where the DPCH\_Ec/lor ratio varies from a level where the DPCH is demodulated under normal conditions, down to a level below Qout where the UE shall shut its power off.

Test Procedure

Initial conditions

Test environment: normal (see annex B).

The frequencies to be tested are mid range as defined in ETSI TS 134 108 [2], clause 5.1:

- 1) Connect the SS to the UE antenna connector.
- 2) A call is set up according to the Generic call setup procedure, with the following exception according to table 5.3.10.1.1-1 for information elements in System Information Block type 1 found in ETSI TS 134 108 [2].

Table 5.3.10.1.1-1: System Information Block type 1 message

| Information Element                       | Value |
|---|-------|
| UE Timers and constants in connected mode |       |
| - T313                                    | 15 s  |
| - N313                                    | 200   |

- 3) RF parameters are set up according to table 4.2.11.2-1 with DPCCH\_Ec/lor ratio level according To table 4.2.11.2-2, 'before A'.
- 4) Enter the UE into loopback test mode and start the loopback test using the procedure defined in ETSI TS 134 109 [3], clause 5.3.

Test Data

**Environmental Conditions** 

| Temperature       | 18~22° C       |
|-------------------|----------------|
| Relative Humidity | 45~66%         |
| ATM Pressure      | 101.1~101.7kPa |

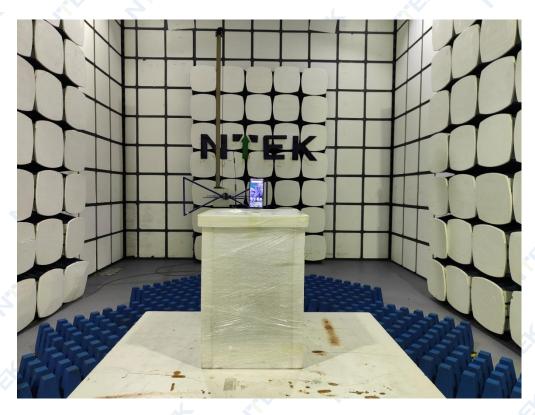

Test Result: Pass.
